This CDS clone is a part of a collection of human full-length
expression clones generated by Harvard Institute of Proteomics.
This ORF clone has been cloned without stop-codon (to allow fusion
with C-terminal tag). The CDS has been directionally cloned using
BD In-Fusion(TM) cloning system between the Sall and HindIII sites
of the pDNR-Dual vector. Additional sequences in the clone: 'ACC'
                                                                                                                                                                                                                                                                                                                                                                      Hines,L., Rolfs,A., Jepson,D., Moreira,D., Raphael,J., Kelley,F.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (04-JAN-2005) Biological Chemistry and Molecular Pharmacology, Harvard Institute of Proteomics, 320 Charles St., Cambridge, MA 02141, USA
This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics. This ORF clone has been cloned with normalized stop-codon. AttB recombination sites have been added to either end of the ORF and

AttB recombination sites have been added to either end of the ORF and directionally cloned using the Gateway cloning system into pDONR 201. Additional sequences in the clone: ACC' before the 'ATG' (corresponding to ribosomal binding site an Kozak consensus sequences). Each clone is clonally isolated and

Desanlis, F., Fournier, A., Maury, I. and Liu, Q.Z.

Polypeptides derived from JNK3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the SalI and HindIII sites of the DNR-DDAL vector. Additional sequences in the clone: 'ACC' after SalI site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame. Clone distribution: http://bioinfo.clontech.com/orfclones.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The method of the invention demonstrates cytostatic activity and may be useful for identifying a risk of, preventing and/or treating breast cancer and: cancer metastasis. The methods may be utilized for gene therapy or RNA interference. The current sequence is that of the human mitogen-activated protein kinase 10 (MAPK10) SNP-containing gDNA MAPK10-AC of the invention which is located at chromosome 4q22.1-q23.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for identifying a subject at risk of breast cancer comprising detecting the presence or absence of a polymorphic variation associated with breast cancer. The method of the invention demonstrates cytostatic activity and may be useful for identifying a risk of, preventing and/or treating breast cancer and cancer metastasis. The methods may be utilized for gene therapy or RNA interference. The current sequence is that of the human mitogen-activated protein kinase 10 (MAPKIO) SNP-containing gDNA MAPKIO-AD of the invention which is located at chromosome 4q22.1-q23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 823
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Roth

                                                                                                                                                                                                                       The specification describes derivatives of JNK (c-jun N-terminal kinase) 3, which have deletions from the N-terminal region corresponding to positions 1-38 of the JNK3alphal and alpha2 isoforms or a c-terminal deletion from position 139. JNK are mitogen-activated kinases implicated in neurodegeneration and apoptosis of neurons. The derivatives are used to identify specific ligands. These ligands, and JNK3-specific antibodies, are used for prevention or treatment of neurodegenerative diseases, e.g. Alzheimer's, Parkinson's or Huntington's diseases, degeneration associated with aging or acquired immune deficiency syndrome, brain injury, or cerebral anoxia, hypoxia or edema. Vector containing sequences encoding the derivatives are useful in gene therapy, e.g. of spinal cord injury and retinal degeneration. The present sequence encodes the derivative JNK3deltaNalpha2
                                                                                                                                                                                            Sequence 1422 BP; 436 A; 322 C; 329 G; 335 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for identifying compounds that modulate CC c-Jun N-terminal kinase 3 (JNK3) expression or activity. The method CC comprises (a) incubating a cell that can express a JNK3 protein, or that CC thas JNK3 activity, with a compound under conditions and for a time CC compound; (b) incubating a control cell under the same conditions and for cclivity without the compound; (c) measuring JNK3 expression/CC activity in the cell in the presence of the compound; (d) comparing the CC amount of JNK3 expression/activity in the presence of the compound; (d) comparing the CC indicates that the compound modulates JNK3 expression/activity. The CC invention also provides a transgenic non-human mammal having a transgene CC disrupting expression of a JNK3 gene, the transgene being chromosomally CC integrated into germ cells of the mammal. JNK3 expression inhibitors; CC excitotoxicity, e.g. Alzheimer's disease, Huntington disease, Parkinson's CC amyotrophic lateral sclerosis, trauma, motorneuron disease, Parkinson's CC disease or epilepsy. The present sequence represents the nucleic acid Sequence of human JNK3 (GenBank accession numbers UJ4820, U07620, L27128, L35236, X12740 and CC U0727 can also be used in the method of the invention. (Updated on 20-the present sequence under the compounce of the mammal conditions.)

                                                                                                                                                                                                 The invention relates to identifying pain-regulating substances (A) comprises (i) incubating a test substance with a cell (or preparation from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analyssic activity. (A) along with nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB8506-ABB85037) that interact with (A); (B); vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, pain; pain; pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polynucleotide of the invention
                                                                                                                                                                            Sequence 1505
                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gillen C,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     present sequence represents a human lymph node cDNA used to detect blood cell and immunological response gene expression. Note: The present sequence does not appear in the printed specification but was obtained in electronic format from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immunopathological conditions, such as AIDS, allergies, anaemia, asthma, atherosclerosis, bronchitis, ulcerative colitis, diabetes, multiple sclerosis, osteoporosis, pancreatitis, infections and arthritis. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to polynucleotides which are used as probes to detect genes differentially expressed in an immunological response, abundantly expressed in an immunological response and/or coding for a polypeptide known to regulate blood cell biology. The polynucleotides are useful in research and diagnostic applications particularly in cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New compositions having a number of first, second and third polynucleotide probes, useful in research and diagnostic applications cancer and immunological conditions e.g. AIDS, diabetes, osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ss; gene; human; immunological response; blood cell; cancer; immunopathological; AIDS; allergy; anaems; asthma; atherosclerosis; bronchitis; ulcerative colitis; diabetes; multiple sclerosis; osteoporosis; pancreatitis; infection; arthritis; lymph node.

mitogen activated protein-kinase inhibitor in admixture with a carrier.

The method involves activation of a biological pathway producing an indicator of the processing of amyloid-beta precursor protein e.g. a indicator of the processing of amyloid-beta precursor protein e.g. a indicator induces the expression of a reporter e.g. alkaline phosphatase, of the pharmaceutical composition further comprises a label indicating use of the composition for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition. The agent is useful in the manufacture of a medicament for inhibiting the processing of amyloid-beta precursor protein in a subject suffering from or susceptible to the abnormal processing of the protein, or for treating or preventing a condition, preferably, Alzheimer's disease. This sequence encodes human mitogen-activated protein kinase 10 (MAPKIO), transcript variant 2, a kinase involved in the up-regulation of amyloid-beta 1-42.

                                                                                                                                                                                                     The invention relates to a method for identifying compounds that modulate CC c-Jun N-terminal kinase 3 (JNKJ) expression or activity. The method CC comprises (a) incubating a cell that can express a JNKJ protein, or that CC sufficient for the cell to express a JNKJ protein and for a time CC sufficient for the cell to express a JNKJ protein/activity without the CC compound; (b) incubating a control cell under the same conditions and for activity in the cell in the presence of the compound; (c) measuring JNKJ expression/ CC activity in the cell in the presence of the compound; (d) comparing the CC indicates that the compound modulates JNKJ expression/activity in the presence and absence of the CC indicates that the compound modulates JNKJ expression/activity. The CC integrated into germ cells of the mammal having a transgene CC disrupting expression of a JNKJ gene, the transgene being chromosomally integrated into germ cells of the mammal JNKJ expression inhibitors, CC e.g. antisense nucleic acids, are used to treat disorders involving capturing the gene cells, captured to treat disorders involving CC excitotoxicity, e.g. Alzheimer's disease, Huntington disease, ischemia, CC disease or epilepsy. JNKJ sequences under GenBank accession numbers CC disease or epilepsy. JNKJ sequences under GenBank accession numbers (c) field** (d) 4820, U07620, L27128, L35236, X12740 and V00727 can be used in CC field** (d) 4820, U07620, L27128, L35236, X12740 and V00727 can be used in contract DR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                The invention relates to a new composition comprising ADI61633-ADI61770and their complements that are cDNAs differentially expressed in brain disorders. Also included are a high throughput method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids and a high throughput method for screening a library of molecules or compounds to identify a ligand that specifically binds a cDNA. The expression of the each of the CDNAs is downregulated at least two-fold in the brain of the subjects with Alzheimer's disease (ADI61727) or upregulated at least two-fold in Alzheimer's disease (ADI61727). The composition is useful for diagnosing or treating Alzheimer's disease. The present sequence is a cDNA downregulated at least two-fold in the brain of the subjects with Alzheimer's disease.
                                                                                                                                                                                                                                                                          Sequence

CR treatment or for the monitoring of treatment of a subject with a brain of disorder. (I) comprises several cDNAs that are differentially expressed con in brain disorders and chosen from any one of 138 nucleotide sequences of CARA3798-ARA43935, or thair complements. Also described: (1) a high collaboration and sample containing nucleic acids; (2) an isolated cDNA (II) collaboration and ambiguity method for detecting differential expression of one or more collaboration and activation of one or more collaboration and activation composition vector (III) containing (III); (2) a high composition vector (III) containing (III); (3) an expression of one or more composition and (6) a pharmaceutical composition composition (V) produced using (IV); and (6) a pharmaceutical composition composition (V); (I) is useful compounds to identify a ligand which specifically binds a cDNA, where the compounds to identify a ligand which specifically binds a cDNA, where the method involves combining (I) with the library of molecules or compound (IV) is useful for culture. (V) is useful for bind throughput method for screening a library of molecules or compounds to identify a ligand which specific binding the protein from the culture. (V) is useful for bind throughput method for screening a library of molecules or compound under conditions to allow specific binding throughput method for screening a library of molecules or compound under conditions to allow specific binding the protein from the culturation of the protein partition with the sample under conditions to compound. (V) is useful for purifying a ligand from a sample, which involves combining (V) or its portion with the sample under conditions to compound to compound the protein from the protein from the protein from the protein and separating the condition and another conditions to condition from ligand. (V) or its portion with the sample under conditions to condition from ligand. (V) or its portion with the sample under conditions to condition to condition to condition to con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnosis; treatment; brain disease; neuroprotective; cerebrop muscular-gen.; cycostatic; neuroleptic; nootropic; antidepress anticonvulsant; analgesic; antiparkinsonian; ophthalmological; immunotherapy; gene therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        á
This invention describes a novel method of identifying a compound that inhibite the processing of amyloid-beta precursor protein in a mammalian cell. The invention also describes; a) an agent for inhibiting amyloid-beta precursor processing consisting of an antisense polynucleotide, a ribozyme or a small interfering RNA (siRNA), where the agent comprises a nucleic acid sequence complementary to, or engineered from, a naturally-coccurring polynucleotide sequence encoding the polypeptide comprising the amino acid sequence of AEG09278 or AEG09279 and b) a pharmaceutical composition comprising the agent for inhibiting amyloid-beta precursor processing or an amyloid-beta precursor processing or inhibiting amount of mitogen activated protein-kinase inhibitor in admixture with a carrier. The method involves activation of a biological pathway producing an indicator of the processing of amyloid-beta precursor protein e.g. a phosphorylated substrate of a kinase comprising AEG09268-AEG09268. The indicator induces the expression of a reporter e.g. alkaline phosphatase,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a compound that inhibits amyloid-beta precursor protein processing in a mammalian cell for treating e.g., Alzheimer's disease by measuring a compound-polypeptide property related to amyloid-beta peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2006-231019/24.

The pharmaceutical composition further comprises a label indicating use of the composition for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition. The agent is useful in the manufacture of a medicament for inhibiting the processing of amyloid-beta precursor protein in a subject suffering from or susceptible to the abnormal processing of the protein, or for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition preferably, Alzhaimer's disease. This sequence encodes human mitogen-activated protein kinase 10 (MAPK10), transcript variant 3, a kinase involved in the up-regulation of amyloid-beta 1-42.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
```

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a

                                                                                                                                                                                                                                                                                                                                                                   WPI; 200
P-PSDB;
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   31-MAR-2000; 2000US-00540217.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in retating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodivérsity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                  Claim 1;
                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, use diagnostics, forensics, gene mapping, identification of n responsible for genetic disorders or other traits and to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc activity of (II) or to treat disease states involving (II). (II) is cuseful for generating antibodies against it, detecting or quantitating a college polypeptide in tissue, as molecular weight markers and as a food consites expressing (II). (I) and (II) are useful in medical imaging consistes expressing (II). (I) and (II) are useful for treating disorders (involving aberrant protein expression or biological activity. The college and polymucleotide sequences have applications in college and polymucleotide sequences have applications in college and polymucleotide sequences have application of mutations consisted for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conting sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this compared the printed specification, but was obtained in clectronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

sequences. (I) reaction (PCR) and in recombin

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II). (II) is consisted the sequence involving (II) and its antibodies against it, detecting or quantitating a colypeptide in tissue, as molecular weight markers and as a food cc polypeptide in tissue, as molecular weight markers and as a food complement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The colypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cand to produce other types of data and products dependent on the analysis of the invention. Note: The sequence data for this coding sequences of the invention. Note: The sequence data for this coding the product of the invention of the product of the produc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes derivatives of JNK (c-jun N-terminal kinase) 3, which have deletions from the N-terminal region corresponding to positions 1-38 of the JNK3alphal and alpha2 isoforms or a C-terminal deletion from position 139. JNK are mitogen-activated kinases implicated in neurodegeneration and apoptosis of neurons. The derivatives are used to identify specific ligands. These ligands, and JNK3-specific antibodies, are used for prevention or treatment of neurodegenerative diseases, e.g. Alzheimer's, Parkinson's or Huntington's diseases, degeneration associated with aging or acquired immune deficiency syndrome, brain injury, or cerebral anoxia, hypoxia or edema. Vector containing sequences encoding the derivatives are useful in gene therapy, e.g. of spinal cord injury and retinal degeneration. The present sequence encodes the derivative JNK3deltaNalphal
                                       Claim 1; Fig 34; 213pp; German
                                                                                Identifying pain-regulating compounds, useful for treating chronic pain and for diagnosis, by measuring binding of compounds to specific peptides

The method is useful for identifying pain-regulating substances (A) with analgesic activity. (A) along with nucleic acid (ABL88411-ABL88411) that encode proteins (B, ABB85006-ABB85037) that interact with (A), (B), vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polynucleotide of the invention
The invention relates to a novel differentiation inducing agent of a leukemia cell. The agent comprises an expression activator or functional activator of a promyelocytic leukemia (PML) protein, or an expression inhibitor or functional inhibitor of the PMLK protein (a PML specific
                                                                                                       Differentiation inducing agent of leukemia cell useful as leukemia therapeutic agent, comprises expression activator/functional activa promyelocytic leukemia protein, or expression inhibitor/functional inhibitor of PMLK protein.

                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes, (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to represent the sequence of the seq

The screening method for the promyelocytic leukemia protein. The differentiation inducing agent is useful as a therapeutic agent of leukemia. This polynucleotide sequence represents the gene encoding leukemia. This polynucleotide sequence represents the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO200175067-A2
